LOW-CODE

From Wikipedia, the free encyclopedia

In [computer software](#), a **general-purpose programming language (GPL)** is a [programming language](#) for building [software](#) in a wide variety of application [domains](#). Conversely, a [domain-specific programming language](#) (DSL) is used within a specific area. For example, [Python](#) is a GPL, while [SQL](#) is a DSL for [querying relational databases](#).

Visual Studio Code for the Web

 Edit

Visual Studio Code for the Web provides a free, zero-install Microsoft Visual Studio Code experience running entirely in your browser, allowing you to quickly and safely browse source code repositories and make lightweight code changes. To get started, go to <https://vscode.dev> in your browser.

VS Code for the Web has many of the features of VS Code Desktop that you love, including search and syntax highlighting while browsing and editing, along with extension support to work on your codebase and make simpler edits. In addition to opening repositories, forks, and pull requests from source control providers like GitHub and Azure Repos, you can also work with code that is stored on your local machine.

VS Code for the Web runs entirely in your web browser, so there are certain limitations compared to the desktop experience, which you can read more about [below](#).

SECURITY

Microsoft Power Platform is cloud-based software as a service (SaaS) solution that is available from within a Microsoft Entra ID tenant. Microsoft Power Platform is licensed through Microsoft 365 and secured by Microsoft Entra ID. Microsoft Power Platform runs on Microsoft Azure; therefore, it's highly scalable and available globally.

GOVERNANCE

The screenshot shows the 'Power Platform admin center | Admin center' interface. The left sidebar contains navigation links: Environments, Analytics, Resources, Help + support, Data integration, Data (preview), Data policies (highlighted), Admin centers, and Power BI. The main content area is titled 'DLP Policies > Edit Policy'. It features a vertical progress bar with four steps: Policy name (Test), Connectors, Scope, and Review. The 'Define scope' section is active, showing options to 'Add all environments', 'Add multiple environments', or 'Exclude certain environments'. The 'Add all environments' option is selected.
