- IT Engineers
- Fusion Team

Business Solution:

A **business solution** is a strategic, well-crafted approach or set of actions designed to address a specific business challenge, opportunity, or need, with the goal of delivering measurable value to customers, stakeholders, or the organization Product Management University. It goes beyond simply offering a product or service — it's about solving a problem or enabling a desired outcome in a way that aligns with business goals.

Core Purpose

A business solution is created to:

- **Identify and solve a problem** or unlock an opportunity.
- **Meet customer needs** by translating their language and goals into actionable outcomes Product Management University.
- **Deliver tangible benefits** such as cost savings, improved efficiency, better customer engagement, or competitive advantage CLIMB.

Key Components (WHO, WHAT, WHY) Product Management University

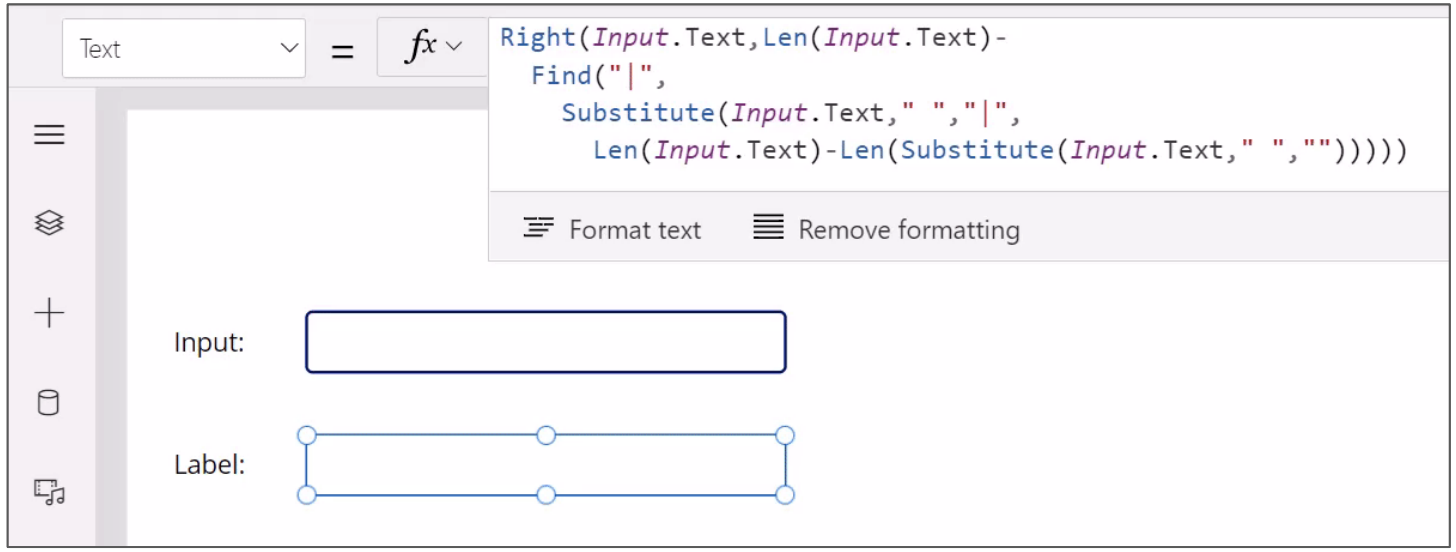

1. **Target Customer** – Who is the solution for?
2. **Job Task** – What is the customer trying to do?
3. **Ideal Outcome** – What would success look like?
4. **Goal** – Why is this outcome valuable?
5. **Obstacles** – What's preventing success and why?

Non-Devs

- The **Requirement Agent** examines the business problem and uses AI to generate user requirements. This step is first step in the plan.
- The **Data Agent** suggests a set of tables for storing business information, complete with recommended columns, data types, and relationships.
- The **Solution Agent** evaluates the needs, processes, and data to create a solution that includes technologies such as apps, flows, and AI agents to address your business problem.

Azure Admins

A managed environment encompasses, but isn't limited to, the following features:

- Environment groups
- Limit sharing
- Weekly usage insights
- Data policies
- Pipelines in Power Platform
- Maker welcome content
- Solution checker
- IP Firewall
- IP cookie binding
- Customer Managed Key (CMK)
- Lockbox
- Extended backup
- Data policies for desktop flow
- Export data to Azure Application Insights
- Administer the catalog
- Default environment routing
- Create an app description with Copilot
- Virtual Network support for Power Platform
- Conditional access on individual apps

- ❑ Virtual Tables

Fusion Team

> Azure Logic Apps, Microsoft Power Automate, Microsoft Power Apps, and Microsoft Copilot Studio offer over 1,000 connectors to connect to Microsoft and verified services, but you might want to communicate with services that aren't available as prebuilt connectors. Custom connectors address this scenario by allowing you to create (and even share) a connector with its own triggers and actions.

Recap:

- Non-Devs
- Pro-Devs
- IT Engineers
- Fusion Team

Low-code is holding its own against, if not edging out pro-code and no-code development for today's modern, scalable, enterprise solutions. Power Apps, Microsoft's SaaS offering to design and build highly custom business apps, is a suite of services and connectors promoting rapid, feature-rich app development.

In this session, we'll explore how Power Apps (I) empowers non-devs, (II) welcomes pro-devs, (III) reduces infrastructure costs, (IV) tackles IT's project backlog, (V) drives process innovation, and (VI) democratizes business solution development.
