

Charles Lakes II

Microsoft® MVP Most Valuable Professional

About Me:

- Pro-Code Developer
- Low-Code Maker
- Biz. Solution Consultant
- Middle-child

Agenda:

- Non-Devs
- Pro-Devs
- IT Engineers
- IT Support

Business Solution:

A **business solution** is a strategic, well-crafted approach or set of actions designed to address a specific business challenge, opportunity, or need, with the goal of delivering measurable value to customers, stakeholders, or the organization Product Management University. It goes beyond simply offering a product or service — it's about solving a problem or enabling a desired outcome in a way that aligns with business goals.

Core Purpose

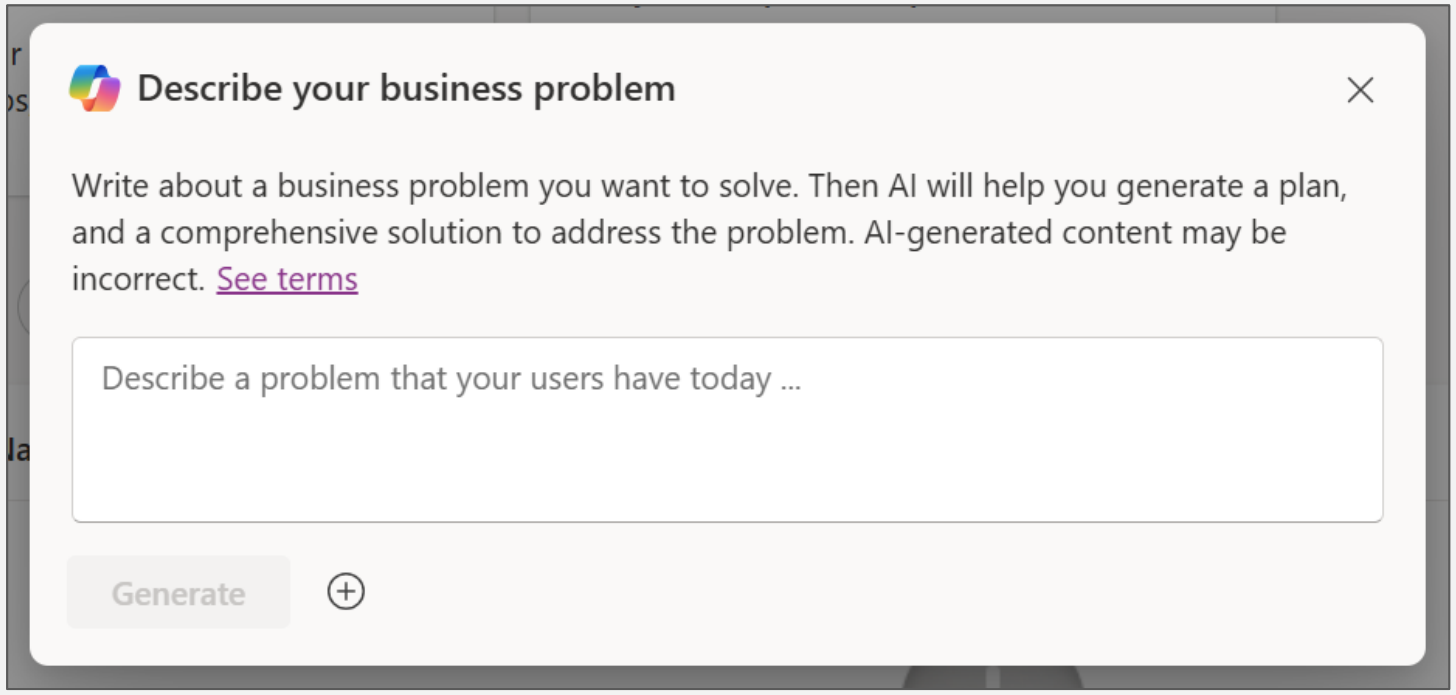

A business solution is created to:

- **Identify and solve a problem** or unlock an opportunity.
- **Meet customer needs** by translating their language and goals into actionable outcomes Product Management University.
- **Deliver tangible benefits** such as cost savings, improved efficiency, better customer engagement, or competitive advantage CLIMB.

Key Components (WHO, WHAT, WHY) Product Management University

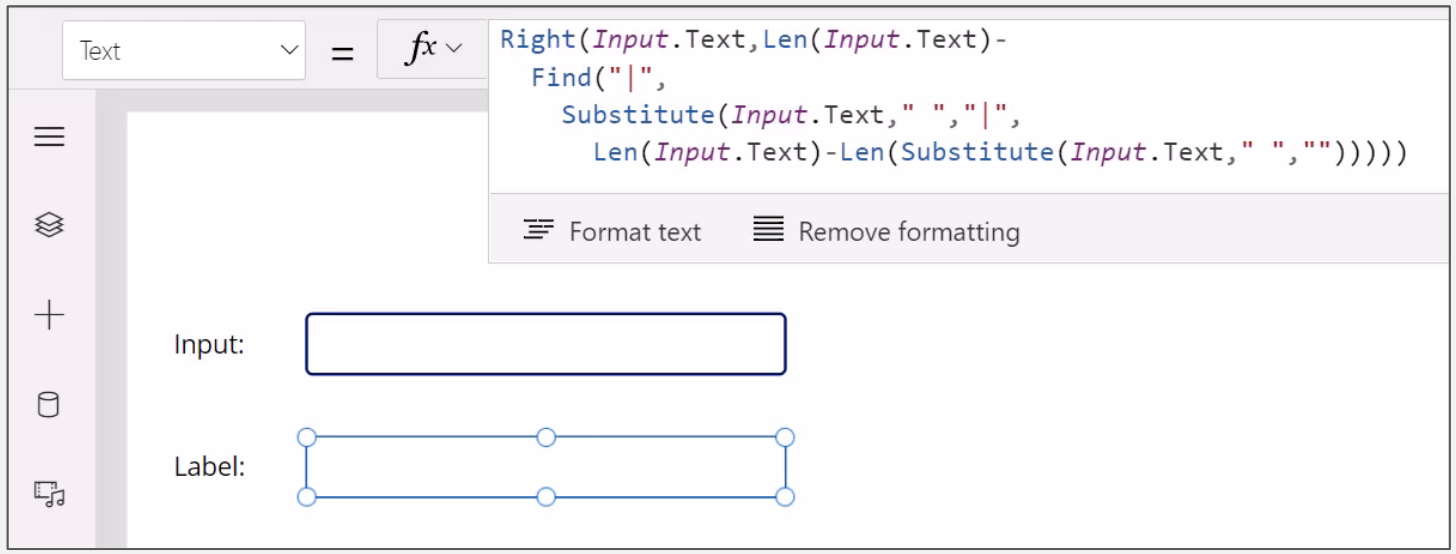

1. **Target Customer** – Who is the solution for?
2. **Job Task** – What is the customer trying to do?
3. **Ideal Outcome** – What would success look like?
4. **Goal** – Why is this outcome valuable?
5. **Obstacles** – What's preventing success and why?

Non-Devs

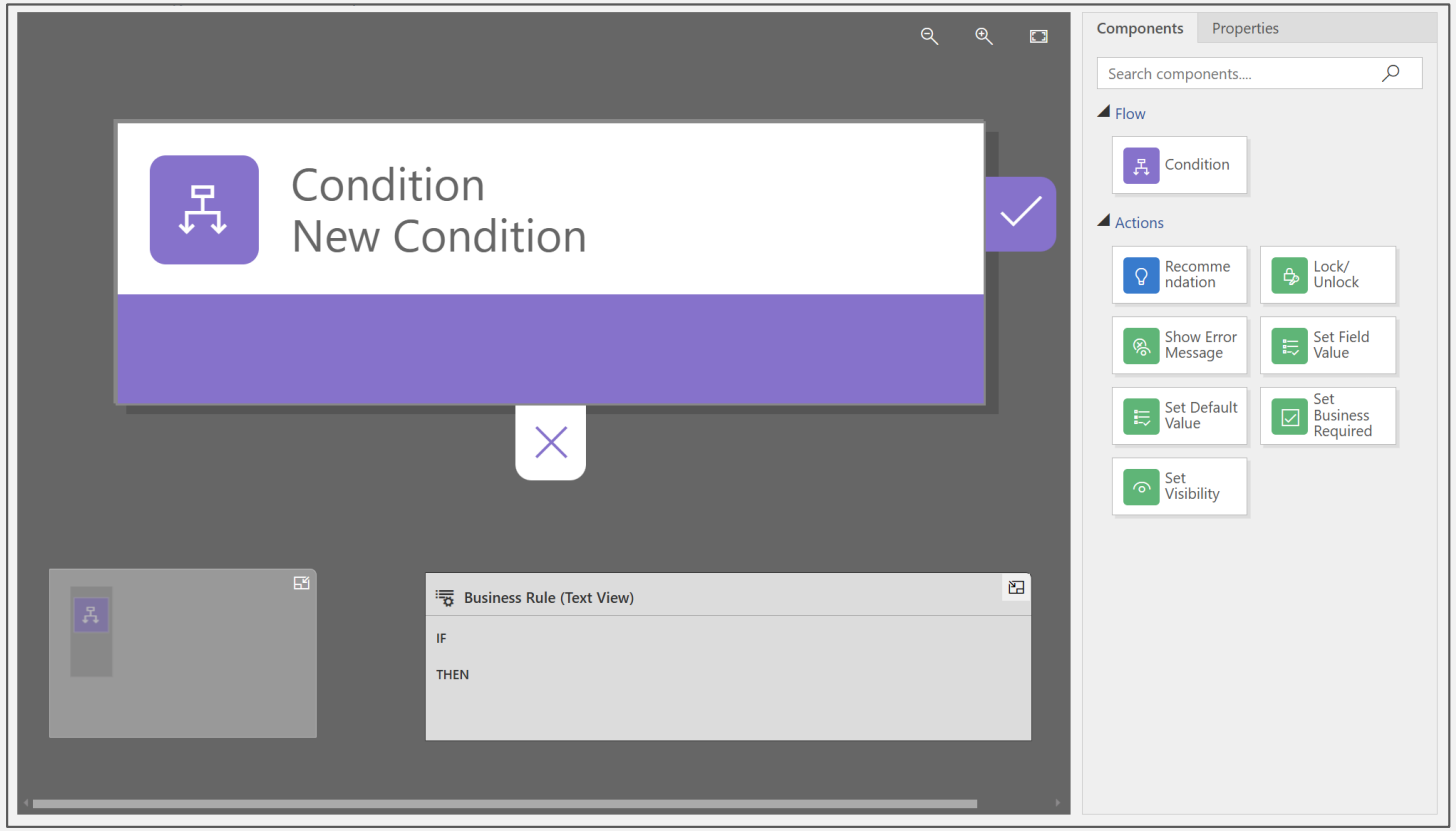

- ❑ Plans in Power Apps
  - Dataverse tables
  - Power Automate flows
  - Power Pages sites
- ❑ Power Fx
- ❑ Business rules

Non-Devs

- Plans in Power Apps
  - Dataverse tables
  - Power Automate flows
  - Power Pages sites
- Power Fx
- Business rules

Non-Devs

- Plans in Power Apps
  - Dataverse tables
  - Power Automate flows
  - Power Pages sites
- Power Fx
- Business rules

Pro-Devs

```
calcDaysInMonth(
    MM:Number,
    YYYY:Number
):Number = IfError(
    Date(
        Year((Date(YYYY, MM, 1) + 45)),
        Month((Date(YYYY, MM, 1) + 45)),
        1
    ) - Date(YYYY, MM, 1),
    0
);
```

- ❑ User-Defined Functions
- ❑ Component Libraries
- ❑ Model Context Protocols (MCP)

Pro-Devs

> **Note**
>
> Component libraries are the recommended way to reuse components across apps. When using a component library, an app maintains dependencies on the components it uses. The app maker will be alerted when the updates to dependent components become available. Hence, all new reusable components should be created within the component libraries instead. An earlier Power Apps feature that allowed importing components from one canvas app to another is retired.

- ❑ User-Defined Functions
- ❑ Component Libraries
- ❑ Model Context Protocols (MCP)

Pro-Devs

The model context protocol (MCP) is an open protocol that enables seamless integration between large language model (LLM) applications and external data sources and tools. Your agent can use the Power Apps MCP Server to communicate with your Power Apps, providing right human-in-the-loop supervision or agentic workflows.

Recap:

- Non-Devs
- Pro-Devs
- IT Engineers
- IT Support

Low-code is holding its own against, if not edging out pro-code and no-code development for today's modern, scalable, enterprise solutions. Power Apps, Microsoft's SaaS offering to design and build highly custom business apps, is a suite of services and connectors promoting rapid, feature-rich app development.

In this session, we'll explore how Power Apps (I) empowers non-devs, (II) welcomes pro-devs, (III) reduces infrastructure costs, (IV) tackles IT's project backlog, (V) drives process innovation, and (VI) democratizes business solution development.
